

## Practice Quiz Chapter Sex nb

1. What is picture 44 a picture of? (circle one)

- a. this is a genetic XX female normal if every way except she received too much estrogen during puberty.
- b. a female with exposure to zero testosterone while a fetus.
- c. this is an XY male whose body developed ovaries instead of testes.
- d. a genetic XX female with prenatal exposure to excess testosterone.
- e. none of the above

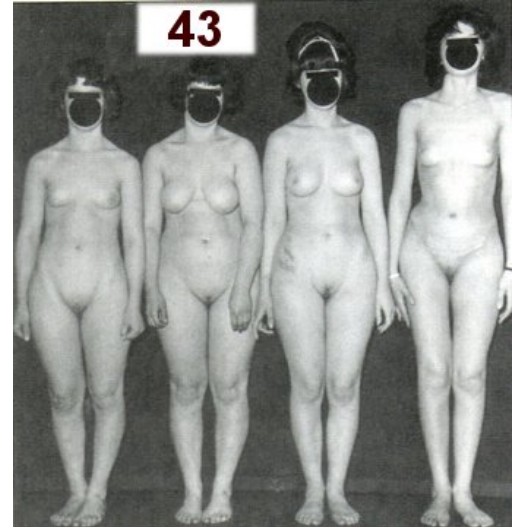

2. Bill has great difficulty maintaining an erection during sex. What might his doctor do in order to determine if his condition is due to a biological defect or psychological issues? (circle one) (from lecture)

- a. The doctor might want to know if the man can have adequate erections during sleep.
  - b. The doctor would measure the angle of the man's erection. Research has demonstrated that men with "downward" curving erections are strongly likely to have erectile disorder. Treatment options would involve surgery or a penis cast to straighten the penis.
  - c. The doctor would order the man to begin having sex only in the missionary position (man on top of the woman). The doctor would also advise the man to NOT masturbate lying down. The doctor wants the man to use positions that don't drain blood from the penis but instead allow more blood flow to the penis.
  - d. The doctor would want to rule out psychological issues as a cause. He would arrange for the client to have sex with a "sexual surrogate", a woman who is trained in the art of lovemaking. The idea is that if a man can't maintain an erection with woman trained in how to give a man sexual pleasure, then the man's problem is biological.
3. Bill has difficulty getting an erection when he tries to make love to his wife. The doctor has told him his problem is psychological. They both are very frustrated and now avoid sex entirely. In order to reduce their anxiety and get them to remember how pleasurable it is to be touched by your partner, what would the therapist likely do? (from lecture) (circle one)
- a. Tell them to have only oral sex for 30 days
  - b. The therapist would use "sensate focus"
  - c. The therapist would likely use a sex surrogate (for example, replace the wife with a "stand in" for sex until the man's anxiety subsides)
  - d. The therapist would ask the couple to see a doctor for an anti-depressant.
4. \_\_\_\_\_ is a sexual disorder more common in younger men, while \_\_\_\_\_ is more common in older men. (from lecture) (circle one)
- a. Androgynism, hyposexuality
  - b. Premature ejaculation, erectile disorder
  - c. Exhibitionism, voyeurism
  - d. Hypoactive sexual desire disorder, sexual aversion
  - e. Dyspareunia, male orgasmic disorder

5. Mary was born a genetic female but believes she is really a male and that God just gave her the wrong body. Albert was born a genetic male, but believes he is really a female. Based on the above knowledge, both persons could be diagnosed with what disorder?

**(circle one)**

- fetishism
  - Intersexuality
  - transsexual
  - Androgen insensitivity
  - Dyspareunia
6. See Picture 43 at the right. What going on here?
- (circle one)**
- These are women who got too much testosterone in the womb. The text called it androgenital syndrome.
  - These are women with Klinefelter's syndrome (XXY).
  - These are men with androgen insensitivity syndrome
  - These are women with Androgyny Syndrome
  - These are men with advanced Chlamydia
  - These are women with androphilia

7. What is menarche? **(circle one)**
- A disorder when women have an early menopause
  - It is a disorder that occurs when men have a downward curving erection. (it arches down)
  - It signals the onset of menstruation at puberty.
  - It signals the end of monthly fertility cycles.
  - It is a gay slang term for men who prefer to be on the bottom.
8. I'm thinking of a young person who was born with an XY chromosome pattern. This person is aroused sexually by males and prefers to relate sexually with males. This person has androgen insensitivity syndrome. This person has always been effeminate and now dresses as a female and believes that they really are a female. This person exhibits the psychological and social traits associated with females.

Fill in the blanks using Male or Female (we'll score ¼ point for each one correct)

Genetic sex is \_\_\_\_\_ Gender identity is \_\_\_\_\_ This person looks like a \_\_\_\_\_

This person has the gonads typical of a \_\_\_\_\_

9. The male sperm carries
- Only x chromosomes
  - Only y chromosomes
  - Both an x and a y in each sperm cell
  - Half the sperm carry an X and half carry a Y.

10. Which person has Klinefelter's syndrome? Which has Turner's syndrome?

11. Why is the story of Bruce Reimer important to us?

- It showed how horrible discrimination against gays can be.
- It showed that treatments for intersexed kids has come a long way. These kids don't have to live in the closet.
- It showed us that you can't ignore the role of biology in determining gender
- It showed us that couples don't have to suffer through sexual dysfunctions. Bruce's premature ejaculation problem was easily solved.

12. I am thinking of a man who invited people into his lab to have sex while he recorded their physiological responses. He gave us the stages of the sexual response cycle. What is his name?

- Kinsey
- William Masters
- Larry Flynt
- Jerry Falwell

13. I am thinking of a piece of tissue that if you have 2 x chromosomes, develops into the outer lips (labia majora). But...if you have and x and a y chromosome, this tissue develops into

- A clitoris
- A nipple
- A scrotum
- Either the foreskin or clitoral hood

14. Identify each picture by placing a name under it. Draw from these names: fetish, frotteurism, masochism, exhibitionism, intersexed, transvestite, androgen insensitivity syndrome (AIS), voyeurism

Treat the 2 pictures above as one.

### Tie Breaker

1. What is the treatment for female orgasmic disorder? **(circle one)**
  - a. Anti-depressants work better than therapy since the problems are usually physical.
  - b. Squeeze technique
  - c. Masturbation

2. Who is the man who in the 1950s, conducted interviews and asked thousands of people about their sexual behaviors. His name was \_\_\_\_\_
- 3.

MZ Males		DZ Males	
Twin #1	Twin #2	Twin #1	Twin #2
yes	yes	yes	no
no	no	no	yes
yes	yes	yes	yes
no	yes	no	yes
yes	yes	yes	no

MZ Males		DZ Males	
Twin #1	Twin #2	Twin #1	Twin #2
no	yes	no	no
yes	no	yes	yes
no	no	yes	yes
yes	yes	yes	no
yes	no	no	no

The text mentions homosexuality and asks if there is a genetic component or if it is heritable. Which hypothetical table above (Top or Bottom)(circle one) illustrates what we know?

4. John is a pedophile in treatment. He gets aroused to images of young girls. His therapist has him masturbate to images of young girls, and he loves to do that. But what his therapist does now, is....just before ejaculation, switches the image from a young girl to a middle aged woman. After a period of time, the therapist moves the image of the middle aged women farther and farther before ejaculation. Pretty soon, the John is getting aroused to the middle aged woman in ways he hadn't before. What is the name of this treatment?

\_\_\_\_\_

### Sudden death

1. Jack is having sex with his wife and screams "I'm gonna cum" He has not yet entered the orgasm stage of the sexual response cycle so he must be in what stage? \_\_\_\_\_

2. Jack rides the subway and likes to rub his genitals against unsuspecting riders. This disorder is known as:
- a. Masochism
  - b. Coprophilia
  - c. Necrophilia
  - d. Frotteurism
  - e. Aerotophilia
  - f. Feelophilia
  - g. Picquerism
  - h. Troilism
3. I am thinking of a disorder that is more common in single people than married people. It is also more common in women than men. This disorder will drive you in for help if you are a woman. It is a disorder more common in someone 20 rather than 40. What is this disorder?
-
